

BIRRUS MATTING SYSTEMS

"a step ahead"

DURAMAT

BIRRUS DURAMAT is a highly effective alternative for heavier traffic areas. It has the same construction and styling as Ultramat except that treads consisting of heavy duty rubber are inserted instead of carpet.

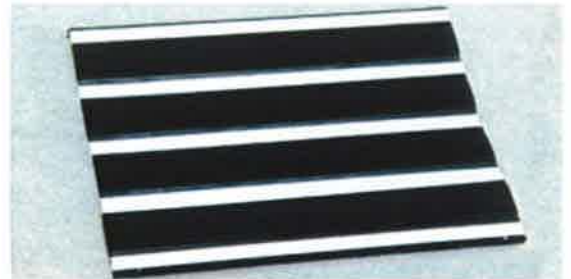

The ribbed rubber scraping bars set between extruded aluminium sections ensure maximum durability and high dirt removing capacity.

DURAMAT provides a safe anti-skid surface idea for wheeled traffic at shopping centres, airport terminals, sporting and community centres, hospitals etc and is suitable for external use.

Available in closed construction in 10mm and 16mm depths, and Open Slimline construction in 10mm depth only. The Open Slimline version is linked with a perforated joining strip to allow for drainage.

10mm Open Construction

10mm Closed Construction
